

Use the following formula to make sure your netting is evenly spaced on the lifeline and hangs correctly.

For:

18" high lifelines, count 14 meshes (diamonds) for every 4' of lifeline

24" high lifelines, count 16 meshes (diamonds) for every 4' of lifeline

30" high lifelines, count 15 meshes (diamonds) for every 4' of lifeline

36" high lifelines, count 17 meshes (diamonds) for every 4' of lifeline

Count out the meshes and tack them in place with white cable ties.

To secure the top edge of the netting, either weave your lifeline cable through the meshes or lace the meshes to the lifeline by wrapping them in place with nylon twine.

To secure the bottom edge of the netting, tie the ¼" polyester rope off at the stanchion near the bow, then weave the rope through the meshes along the deck, tying off at every stanchion with two or more overhand knots.

When you are done, you can also tack the netting in place along the top and bottom every foot or so using white cable ties.
